Our medium-term FX views

USD weakness theme to gain traction again

For G10 FX, we see scope for *USD weakness* to extend into end-2026 and 2027.

Macroeconomic data have surprised to the downside, while *positioning* has only partly adjusted towards being short USD. We expect a softer data trend in Q4 with elevated yields keeping pressure on the rate-sensitive sectors. **We do not expect the Fed to hike rates**, with inflation likely to soften a little further, but we do see rate hikes from the ECB, RBNZ and BOJ. **We generally favour those currencies with scope for rate hikes alongside a positive external flow backdrop.** Political and fiscal factors may come more into focus, for the US around the midterms and with Secretary Bessent's more interventionist approach, and in the UK, New Zealand and Sweden.

For Asia ex-Japan, we favour outperformance in CNH, TWD and SGD versus underperformance in IDR and INR. Strong capital flows are likely to support CNH (i.e., corporate FX remittances) and TWD (i.e., portfolio inflows), with the latter a clear beneficiary of the global AI trade. Singapore's strong domestic growth momentum amid inflation risks suggest a supportive FX policy stance for SGD. INR and IDR may face more challenging BoP dynamics amid local-specific concerns. While we expect KRW to appreciate (i.e., strong current account surplus), there is a risk that portfolio outflows could dominate current account inflows if Korean equities rebound strongly.

North America (USD, CAD)

Fig. 2: USD: Depreciation theme picking up steam

We continue to expect USD depreciation, with DXY to fall around 2% by end-2026.

Our *bearish* USD view started to gain more traction in Q3 as *US economic data have rolled over* relative to expectations, with notable downside surprises in *nonfarm payrolls* and *inflation data* in recent months. After we last published, Fed pricing for the end of the year fell, as *Fed Chair Warsh offered little* in the way of hawkish follow up to the most recent FOMC meeting, although his Jackson Hole speech was more hawkish. **We continue to think the Fed will remain on hold, curbing USD strength.** Concerns about Fed independence have not disappeared either.

Treasury Secretary Bessent's increasingly interventionist approach to markets has also raised some concerns about USD. Measures to curb upward pressure on US bond yields point towards **financial repression, which would ultimately weigh on USD**. Foreign buying of US debt has been *slowing* in recent months, while speculative positioning still appears to be skewed long despite the turn lower in economic activity data.

The offset to these negative forces remain still *strong flows into US equities*, still healthy carry on long USD positions and geopolitical volatility in the Middle East which is keeping oil prices somewhat elevated and providing a bid to USD. Should these factors start to wane, then *USD weakness could become more pronounced*, in our view.

Source: Bloomberg, Nomura

Fig. 3: CAD: Trade risks remain notable but signs of broader stabilisation are an offset

1-year forward 1-year swap rate differential (US-Canada) and USD/CAD

**We forecast USD/CAD at 1.40 at end-2026.**

CAD recovered in recent months thanks to improving Q2 economic data. However, **underperformance is likely to return, in our view**, owing to political uncertainty over US tariffs, and consequently the Bank of Canada's relatively dovish outlook.

On the US-Canada tariff war, **our US economics team sees strong incentives for both sides to eventually reach an agreement**, as a sizeable share of Canadian employment is linked to exports to the US, while the US also relies on Canada for several key imports (e.g., iron and steel, autos). **However, as long as the political outlook remains uncertain, we believe Canadian business sentiment will be soft**, as was evident in the BoC's Q2 Business Outlook Survey.

Inflationary pressures in Canada have been benign, allowing the BoC to keep its policy rate at 2.25% since October 2025. The Bank does not consider higher energy prices and tariffs themselves as strong reasons for hiking. But even in this situation, **the market is pricing BoC rate hikes into 2027, which we believe is unlikely to occur**, and the market possibly pricing out this expectation should weigh on the CAD.

Source: Bloomberg, Nomura

DM Europe (EUR, GBP, CHF, SEK, NOK)

Fig. 4: EUR: Improving data, sticky inflation, strong portfolio inflows and short positioning all suggest further appreciation

We forecast EUR/USD moving to 1.20 by year-end and 1.25 by end-2027.

Since the *last Horizons report* we have become more convinced of our view of a stronger EUR, bringing forward our view of appreciation. **Macroeconomic data have surprised to the upside** with a considerable margin, and while the absolute pace of growth is not especially high relative to other DM economies, the backdrop is much more positive than many feared at the onset of the US-Iran war. Inflation pressures remain stubborn, and **the ECB's reaction function is more hawkish than many of its peers**. This leads us to expect a 25bp hike in September with risks of further tightening.

The latest portfolio flow data show **foreign investor appetite for euro area assets remains robust**, especially debt. *June 2026 saw the largest inflows on record* into these assets (both in nominal terms and as a % of GDP). Alongside a steady current account surplus, the flow backdrop for EUR is positive. This is meaningful when global investors are showing concerns about government debt dynamics. *The risk of political volatility is rising* but should not harm EUR that much due to its more positive aggregate fiscal position, in our view.

Finally, positioning metrics continue to suggest investors are short EUR with only a limited shift in certain sub-sectors of the market, leaving the path clear for further appreciation.

Source: Bloomberg, Nomura

Fig. 5: GBP: Resilience likely to fade in H2, with a lack of rate hikes, seasonal slowdown and fiscal challenges

We forecast modest GBP strength against USD, with a move to 1.38 by end-2027. **We see EUR/GBP rising to 0.88 by end-2026 and 0.91 by end-2027.**

GBP has been supported by positive carry and resilient activity data in recent months, with UK activity surprises firmly in positive territory in the summer. However, this is likely to fade. There is likely to be some residual seasonality in activity data in the post-COVID period that should see H2 data soften relative to H1. Meanwhile, **inflation and labour market data, which are key for the Bank of England, do not suggest much upside pressure on inflation.** We continue to think the BoE will be on hold from here, eventually cutting in 2027, while market pricing continues to look for two more hikes.

Political and fiscal risks will also become more prominent. New Prime Minister Andy Burnham will give his first major policy speech at the Labour Party Conference in late-September, with the budget on 28 October. **Fiscal constraints are bigger in the UK than in most DM economies.** We think the government will find it hard to deliver meaningful spending cuts. As such, either higher taxes or reduced fiscal headroom are the likely outcomes, neither of which would be favourable to the market.

Source: Bloomberg, Nomura

Fig. 6: CHF: Standing out as a funder of choice amid low domestic inflation

We expect EUR/CHF to trade flat around 0.94 in the months ahead, and see USD/CHF a little lower due to EUR strength.

CHF's underperformance has been driven by a surge in carry trade activity, in our view, and the fact that FX intervention in JPY and potential BOJ rate hikes have made JPY a less favoured funding source.

The SNB appears very unlikely to shift to a tightening bias any time soon. Inflation has softened once again, with both headline and core measures running below 0.5% y-o-y in recent months. SNB board member Petra Tschudin even remarked in August that rates could go below zero if needed (Bloomberg). Our estimate of FX intervention for July suggest some FX purchases by the SNB to limit CHF appreciation, albeit much smaller than in the past.

The risk to the recent trend would be if financial market volatility picked up or markets became concerned about "debasement" elsewhere. In those environments, Switzerland's low inflation would be seen as a positive and position reducing could see a sharp rebound in the franc.

Source: Bloomberg, Nomura

Fig. 7: SEK: Inflation pressures rebuilding amid resilient domestic demand – next Riksbank move likely a hike

We forecast EUR/SEK to be broadly stable at 11.2 by year-end, but see NOK/SEK falling to parity.

The outlook is improving for SEK, as inflation momentum picks up against a backdrop of improving domestic demand. Although headline inflation remains clearly below target, this has been skewed by the VAT cut on food. Recently sequential inflation data have picked up considerably, while y-o-y measures have been higher than the Riksbank (and the consensus forecasts) had been expecting.

The Riksbank's August meeting and minutes made it clear that **the risks to the policy rate are skewed to the upside, with the possibility of a hike this year**. While our house view is that the next rate rise won't materialise until early 2027, we do see risks of this happening sooner. Q2 GDP was much stronger than expected and survey data for early Q3 have continued to accelerate. The unemployment rate appears to be stabilising, though there are few signs yet of a significant improvement or notable wage pressures.

Elections are due on 13 September 2026 with *recent polling suggesting a centre-left coalition could take power*. This carries the risk of some less market-friendly policies (e.g. a tax on bank's net interest income), but overall there are no major fiscal concerns facing Sweden and so we would expect the financial market impact of most political outcomes to be small.

Source: Bloomberg, Nomura

Fig. 8: NOK: Outperformance should subside as oil prices stabilise and the rate cycle peaks

We forecast NOK to underperform, with EUR/NOK rising to 11.2 by end-2026 and NOK/SEK falling below parity in 2027.

NOK has been the best performing G10 currency in Q3, as the rebound in oil/gas prices and strong performance of carry have both supported the currency. We see scope for both these factors to become less positive for NOK.

While there is little clarity over the Middle East, we note that the US administration seems to be shifting to a less militaristic approach. Oil prices remain below their earlier peak and there are few signs that officials are comfortable with much higher prices. This should cap NOK upside.

Meanwhile, NOK has traded firmer than would be expected relative to the shift lower in Norway rate expectations. Inflation has come in a little lower than expected and the likelihood of a further Norges Bank hike has receded. The convergence – albeit gradual – of rates from current levels should drag NOK lower versus the likes of EUR and SEK, where the risks are building more towards rate hikes, in our view.

FX purchases by the Norges Bank for September, the first of 2026, should also slow NOK gains or even see them reverse, as the lagged impact of higher energy prices creates a larger NOK surplus to be recycled into foreign assets.

Source: Bloomberg, Nomura

DM Asia (JPY, AUD, NZD)

Fig. 9: JPY: The Takaichi administration's approval ratings have fallen; as the government's tolerance towards inflation declines, this should encourage the BOJ to accelerate the pace of its rate hikes

Public opinion polls on the approval rating of the Takaichi Cabinet since Sanae Takaichi became Prime Minister of Japan in October 2025

Although we are tactically bearish on JPY, thinking cross/JPY may continue to head higher in the near-term, we see an eventual path for JPY appreciation. The unusual involvement of the US to address JPY weakness is one factor that will likely limit any potential disorderly JPY selling. The US Treasury's efforts to rein in rising long-end US interest rate should also ease upward momentum in USD/JPY. We thus retain our forecast of USD/JPY at 154 at end-2026.

On Japan-oriented factors, the Takaichi government's tolerance towards inflation and JPY weakness could fall, as the Takachi Cabinet's support rating is gradually declining. A September hike by the BOJ, although 80% priced in, will be evidence of PM Takaichi's limited resistance to faster rate hikes. That said, whether the BOJ will raise its policy rate to a restrictive level is key for JPY to outperform strongly, while our terminal rate view is 1.75% in April 2027.

Stronger capital inflows would also be an important catalyst for JPY appreciation, but we have not yet seen strong signs of Japanese investors planning to repatriate their capital. The main focus will be on any potential increase in the GPIF's JGB asset weightings, though we believe the hurdle for this is still high, as it has greater governance and autonomy since 2015.

Source: List of media outlets in the figure, Nomura

Fig. 10: AUD: Strong fundamentals can keep appreciation path intact

We forecast AUD/USD rising to 0.75 in 2027.

AUD has been a consistent outperformer in 2026 and we think this can continue, although the speed of further gains may become constrained by a combination of positioning and rate moves already being well priced in.

The key supports for the AUD – namely a robust economic performance, relatively high carry and exposure to rising commodity prices – seem likely to persist in the months ahead. Indeed, the *upside surprise to July CPI inflation* has raised the possibility of a further rate hike by the RBA, something that *was discussed at the August meeting*. Although our base case remains for no further increase in the cash rate, we concede that the next few meetings are live and growing market thoughts of a hike can sustain AUD. A shift to an easing cycle still looks some way off, which should allow AUD carry positions to perform well. AUD also offers a high yield without the concerning debt dynamics of many other major economies, and can benefit from ongoing diversification flows.

Our biggest concern for AUD comes from external factors. AUD remains sensitive to global equity returns and should financial market volatility rise suddenly, long carry positions could face a sharp retracement.

Source: Bloomberg, Nomura

Fig. 11: NZD: Outperformance may persist but positive view risks are becoming well priced in

We forecast NZD/USD to rise to 0.63 through 2027.

Our view that NZD would outperform due to a turn in the central bank cycle towards hikes and a reduction in sizeable short positioning has been playing out well, though the moves have become choppy in recent weeks, especially as commodity prices remain elevated.

We still see two more hikes from the RBNZ this year, in September and December, and although these are well priced by the rates market, there is still room for NZD to make gains in our view as its carry differential improves. **Foreign ownership of bonds still has scope to recover** to its recent cycle high, while steady if unspectacular improvements to the growth outlook are also somewhat supportive for the time being.

However, we are wary that this view could run out of steam in the months ahead, and that the RBNZ could start to signal a pause in its tightening at one of the next few meetings. That could weigh on NZD, as short positioning has been much reduced in recent months. **The election on 7 November also poses a risk** if the current opposition Labour party garners more support. Labour may look to raise capital gains taxes, which could weigh on investor sentiment.

Source: Bloomberg, Nomura

AeJ FX (CNY, TWD, KRW, IDR, INR, SGD)

Fig. 12: CNH: Resilient onshore exporters' remittances and official FX bias support RMB appreciation

We forecast USD/CNH at 6.50 by end-2026, owing to the authorities' apparent acceptance of gradual FX appreciation, robust Chinese corporate FX trade settlement amid large trade surpluses, stabilization of foreign flows into China equity markets and substantial RMB undervaluation.

There is a relatively clear downtrend in the USD/CNH fixing, even though the authorities have shown some restraints in limiting both the downside and upside. With the daily fixing continuing to print fresh year-to-date lows, we believe the authorities are comfortable with the current moderate pace of RMB appreciation amid a weaker CFETS basket, in contrast with the rapid appreciation of RMB *episode* of late February 2026.

Meanwhile, **exporter remittances** remain a key driver of RMB appreciation. The onshore corporate net FX trade settlement ratio has remained resilient at an average of 82% of trade surplus (adjusted for RMB settlement) over the three months to July, underpinned by strong export growth and a monthly *trade surplus* that has exceeded USD100bn for three consecutive months to July 2026. On BoP dynamics, **stable US-China relations** and positive sentiment over China's AI industry should continue to create a conducive environment for China's capital inflows amid substantial **RMB undervaluation**, especially on a productivity-adjusted basis.

Source: Bloomberg, CEIC, Nomura.

Fig. 13: TWD: Foreign equity inflows and robust local fundamentals support TWD

We forecast USD/TWD at 30.8 by end-2026.

Taiwan should remain a significant **beneficiary of the strong global AI uptrend**, with TWD supported by foreign equity inflows, as sentiment toward global AI sector stabilises. Our equity research analysts expect the **AI trade to re-emerge** following the consolidation in July (the market reacted negatively to TSMC's earnings report at end-July despite a clear guidance beat). Indeed, foreign investors turned net buyers of Taiwanese equities in August (USD9.1bn), reversing from average monthly outflows of USD20.8bn over the prior two months (June and July). We also expect Taiwan to continue to **benefit from strong exports and a large current account surplus** (USD58.4bn in Q2). Our economist forecasts a **current account surplus** of USD215bn (20.3% of GDP), above-consensus GDP growth of 12.5% for 2026 and for the CBC to start to hike rates in **December 2026**.

A softer USD environment could encourage some Taiwan life insurers and exporters to consider **increasing their FX hedging ratios and reducing their USD hoarding**. Separately, **potential scrutiny from the US Treasury** on the central bank's currency practices may limit CBC's inclination to buy USD. TWD remains as one of the most undervalued currencies in Asia – significantly **undervalued** at 15.7%, based on our FX valuation models.

Source: Bloomberg, CEIC, Nomura.

Fig. 14: KRW: Some positive shifts in external and local factors, but there are still reasons to be cautious

The substantial KRW outperformance over the past two months (vs. USD and NEER basis) has been driven by the consistently robust current account surplus owing to strong semiconductor exports. Strong current account inflows are likely to continue in the coming months as *forecast* by our economics team.

However, the **change in other capital flows has enabled the current account surplus to have a bigger impact on KRW**. Since July, we believe there has been: 1) **limited forced selling from foreigners** in relation to the 10% maximum holding cap on single stocks (EU UCITS regulations) following the sharp corrections in Korea semiconductor companies; 2) another supportive development was the **repatriation of USD26.5bn ADR proceeds by SK Hynix**; 3) many in the market suggested that around the end of July period, there was a **significant unwind of long USD/KRW NDF positions** because fast money investors were “over-hedged” as local stock valuations had fallen; and 4) the fall in domestic stock prices from the peak in June (KOSPI ~25% lower) would have **reduced Korea NPS AUM and outflows** into foreign assets.

Korea has complex capital flow dynamics, and KRW has gone from a substantial negative phase to a speedy positive appreciation phase over the past 12 months. From here, the current account surplus theme should be largely intact, but if Korean equities rebound strongly, the risks ahead could shift to renewed forced selling of Korea equities (i.e., by funds subject to EU UCITS regulations), fast money rebuilding on long USD/KRW hedges and NPS portfolio outflows picking up.

Source: Bloomberg, CEIC, Nomura.

Fig. 15: IDR: Underperformance from local policy concerns, fiscal and credit rating risks and erosion of BI credibility

We forecast USD/IDR at 17,550 by end-2026, with IDR remaining one of the key underperformers within AeJ.

We see local developments, especially the government's policy and politics, as weighing on the IDR over the medium term. To finance President Prabowo's populist growth policies, **efforts on fiscal extraction have picked up**, including the creation of the DSI, which was set up to increase state revenue from exports of commodities. Other concerns for investors include the **strengthening of the FX export proceeds repatriation rule for natural resource exports**, the government's **evolving de-regulation policy framework**, which may contribute to increased business uncertainty, as well as the ongoing **anti-corruption drive**. Furthermore, the market is also concerned about the **potential for fiscal dominance** that might weaken BI independence and policy credibility. On **fiscal policy**, we believe there is more likely to be below-the-line spending to accommodate any fiscal slippage. All these developments point to the risk of sovereign credit rating downgrades.

These factors are likely to keep **challenging Indonesia's BoP** owing to the potential for portfolio outflows, slowing net FDI inflows and a widening current account deficit – all in the face of **relatively low FX reserve adequacy levels**. However, there are some mitigating factors, such as investors having already been underweight Indonesia bonds for over a year, some adjustment to foreign equity positioning this year and the weaker USD theme that is building.

Source: Bloomberg, CEIC, Nomura.

Fig. 16: INR: The RBI likely has a preference for accumulating FX reserves in the longer term

We forecast USD/INR at 94.0 by end-2026, with INR likely to underperform within AeJ owing to the RBI's FX reserves stance.

This is because: 1) **the early closure of the RBI's FCNR(B) scheme (i.e., 31 August) is likely to remove a source of market positivity.** Admittedly, inflows under the scheme have been *strong*, reaching USD65.4bn as of 21 August. However, this may still *be a disappointment* to the more optimistic market participants. With some market participants viewing that these "borrowed dollars" are "**too costly**" (e.g., RBI ex-Governor Subbarao; *Bloomberg*, 11 August), they are also pondering whether the RBI **could end the swap schemes for ECBs and OFCBs earlier than scheduled** (i.e., before 31 December 2026); 2) **we believe that the RBI has a preference for accumulating FX reserves from this FCNR(B) scheme**, owing to the significant drainage of FX reserves since late 2024 (USD111.2bn of spot FX selling from October 2024-May 2026), as well as the significant build up of a large short FX forward book (i.e., -USD136.8bn as of end-July 2026). We note that in the 12 months after the closure of the 2013 FCNR(B) FX swap window (i.e., between December 2013 and November 2014), the **RBI accumulated USD75.0bn of FX reserves** (spot + forward; 28.4% of November 2013 FXR), as market conditions turned more conducive; and 3) **we are still concerned over INR from a current account deficit and capital inflow perspective.** Uncertainty over the Iran war remains elevated and the associated high energy prices raise the risk of higher trade deficits; there remain concerns over India's services surplus from the advent of AI technology; India is also likely to benefit less from an equity flow perspective from the latest round of positivity over AI; and disappointment on the delay in India being included in the Bloomberg's Global Aggregate Index.

Source: Bloomberg, CEIC, Nomura.

Fig. 17: SGD: S\$NEER appreciation slope and risk of further MAS FX policy tightening support SGD outperformance

We forecast USD/SGD at 1.240 by end-2026, supported by the MAS's policy setting of an **appreciating** S\$NEER.

We believe SGD should continue to outperform amid robust local fundamentals, including: 1) the **still robust growth trajectory** with our economics team **forecasting** 2026 GDP growth at an above-trend 5.7% (official forecast: 4.5%-5.5%), driven by the global tech uptrend, resilient construction activity, expansionary fiscal support measures and strong domestic demand. With **Singapore's positive output gap likely to widen** in the coming months, this will continue to support SGD outperformance; and 2) **core inflation is set to rise further**. July core inflation picked up materially, led by the upward adjustment in electricity and gas tariffs. Based on the details, our economics team noted that **price pressures are broadening**, especially in items that are sensitive to energy price inputs and are demand-driven. The MAS remains highly vigilant on inflation risks, and a further FX policy tightening might emerge if inflation pressures intensify.

Overall, the **risk of the MAS further tightening its FX policy** is likely to keep SGD supported.

Valuation methodology - Fixed Income

Nomura's Fixed Income Strategists express views on the price of securities and financial markets by providing trade recommendations. These can be relative value recommendations, directional trade recommendations, asset allocation recommendations, or a mixture of all three.
The analysis which is embedded in a trade recommendation would include, but not be limited to:

- Fundamental analysis regarding whether a security's price deviates from its underlying macro- or micro-economic fundamentals.
- Quantitative analysis of price variations.
- Technical factors such as regulatory changes, changes to risk appetite in the market, unexpected rating actions, primary market activity and supply/ demand considerations.

The timeframe for a trade recommendation is variable. Tactical ideas have a short timeframe, typically less than three months. Strategic trade ideas have a longer timeframe of typically more than three months.

For the purposes of the EU Market Abuse Regulation, the distribution of ratings published by Nomura Global Fixed Income Research is as follows:

52% have been assigned a Buy (or equivalent) rating; 50% of issuers with this rating were supplied material services by the Nomura Group**.*

0% have been assigned a Neutral (or equivalent) rating.

48% have been assigned a Sell (or equivalent) rating; 50% of issuers with this rating were supplied material services by the Nomura Group.

As at 30 Jun 2026.

(l) Nomura Fiduciary Research & Consulting Co., Ltd. ('NFRC') Tokyo, Japan. (m) Nomura Orient International Securities Co., Ltd ("NOI"), is a majority owned joint venture amongst Nomura Group, Orient International (Holding) Co., Ltd, and Shanghai Huangpu Investment Holding (Group) Co., Ltd. In accordance with the laws of the People's Republic of China ("PRC", excluding Hong Kong, Macau and Taiwan, for the purpose of this document), NOI is licensed in the PRC to provide securities research and investment recommendations and it operates independently from the other members of the Nomura Group; in particular, NOI's interests in PRC securities are not disclosed to, or aggregated with the holdings of, any other Nomura Group entities and the interests in PRC securities of other Nomura Group entities are not disclosed to, or aggregated with the holdings of, NOI. An individual name printed next to NOI on the front page of a research report indicates that individual is employed by NOI to provide research assistance to NIHK under a research partnership agreement. 'NSFSPL' next to an employee's name on the front page of a research report indicates that the individual is employed by Nomura Structured Finance Services Private Limited to provide assistance to certain Nomura entities under inter-company agreements. 'Verdhana' next to an individual's name on the front page of a research report indicates that the individual is employed by PT Verdhana Sekuritas Indonesia ('Verdhana') to provide research assistance to NIHK under a research partnership agreement and neither Verdhana nor such individual is licensed outside of Indonesia.

THIS MATERIAL IS: (I) FOR YOUR PRIVATE INFORMATION, AND WE ARE NOT SOLICITING ANY ACTION BASED UPON IT; (II) NOT TO BE CONSTRUED AS AN OFFER TO SELL OR A SOLICITATION OF AN OFFER TO BUY ANY SECURITIES IN ANY JURISDICTION WHERE SUCH OFFER OR SOLICITATION WOULD BE ILLEGAL; AND (III) OTHER THAN DISCLOSURES RELATING TO THE NOMURA GROUP, BASED UPON INFORMATION FROM SOURCES THAT WE CONSIDER RELIABLE, BUT HAS NOT BEEN INDEPENDENTLY VERIFIED BY NOMURA GROUP.

Other than disclosures relating to the Nomura Group, the Nomura Group does not warrant, represent or undertake, express or implied, that the document is fair, accurate, complete, correct, reliable or fit for any particular purpose or merchantable, and to the maximum extent permissible by law and/or regulation, does not accept liability (in negligence or otherwise, and in whole or in part) for any act (or decision not to act) resulting from use of this document and related data. To the maximum extent permissible by law and/or regulation, all warranties and other assurances by the Nomura Group are hereby excluded and the Nomura Group shall have no liability (in negligence or otherwise, and in whole or in part) for any loss howsoever arising from the use, misuse, or distribution of this material or the information contained in this material or otherwise arising in connection therewith.

Opinions or estimates expressed are current opinions as of the original publication date appearing on this material and the information, including the opinions and estimates contained herein, are subject to change without notice. The Nomura Group, however, expressly disclaims any obligation, and therefore is under no duty, to update or revise this document. Any comments or statements made herein are those of the author(s) and may differ from views held by other parties within Nomura Group. Clients should consider whether any advice or recommendation in this report is suitable for their particular circumstances and, if appropriate, seek professional advice, including tax advice. The Nomura Group does not provide tax advice.

The Nomura Group, and/or its officers, directors, employees and affiliates, may, to the extent permitted by applicable law and/or regulation, deal as principal, agent, or otherwise, or have long or short positions in, or buy or sell, the securities, commodities or instruments, or options or other derivative instruments based thereon, of issuers or securities mentioned herein. The Nomura Group companies may also act as market maker or liquidity provider (within the meaning of applicable regulations in the UK) in the financial instruments of the issuer. Where the activity of market maker is carried out in accordance with the definition given to it by specific laws and regulations of the US or other jurisdictions, this will be separately disclosed within the specific issuer disclosures.

This document may contain information obtained from third parties, including, but not limited to, ratings from credit ratings agencies such as Standard & Poor's. The Nomura Group hereby expressly disclaims all representations, warranties or undertakings of originality, fairness, accuracy, completeness, correctness, merchantability or fitness for a particular purpose with respect to any of the information obtained from third parties contained in this material or otherwise arising in connection therewith, and shall not be liable (in negligence or otherwise, and in whole or in part) for any direct, indirect, incidental, exemplary, compensatory, punitive, special or consequential damages, costs, expenses, legal fees, or losses (including lost income or profits and opportunity costs) in connection with any use or misuse of any of the information obtained from third parties contained in this material or otherwise arising in connection therewith. Reproduction and distribution of third-party content in any form is prohibited except with the prior written permission of the related third-party. Third-party content providers do not, express or implied, guarantee the fairness, accuracy, completeness, correctness, timeliness or availability of any information, including ratings, and are not in any way responsible for any errors or omissions (negligent or otherwise), regardless of the cause, or for the results obtained from the use or misuse of such content. Third-party content providers give no express or implied warranties, including, but not limited to, any warranties of

merchantability or fitness for a particular purpose or use. Third-party content providers shall not be liable (in negligence or otherwise, and in whole or in part) for any direct, indirect, incidental, exemplary, compensatory, punitive, special or consequential damages, costs, expenses, legal fees, or losses (including lost income or profits and opportunity costs) in connection with any use or misuse of their content, including ratings. Credit ratings are statements of opinions and are not statements of fact or recommendations to purchase hold or sell securities. They do not address the suitability of securities or the suitability of securities for investment purposes, and should not be relied on as investment advice. Any MSCI sourced information in this document is the exclusive property of MSCI Inc. ('MSCI'). Without prior written permission of MSCI, this information and any other MSCI intellectual property may not be duplicated, reproduced, re-disseminated, redistributed or used, in whole or in part, for any purpose whatsoever, including creating any financial products and any indices. This information is provided on an "as is" basis. The user assumes the entire risk of any use made of this information. MSCI, its affiliates and any third party involved in, or related to, computing or compiling the information hereby expressly disclaim all representations, warranties or undertakings of originality, fairness, accuracy, completeness, correctness, merchantability or fitness for a particular purpose with respect to any of this material or the information contained in this material or otherwise arising in connection therewith. Without limiting any of the foregoing, in no event shall MSCI, any of its affiliates or any third party involved in, or related to, computing or compiling the information have any liability (in negligence or otherwise, and in whole or in part) for any damages of any kind. MSCI and the MSCI indexes are services marks of MSCI and its affiliates.

The intellectual property rights and any other rights, in Russell/Nomura Japan Equity Index belong to Nomura Fiduciary Research & Consulting Co., Ltd. ("NFR") and FTSE Russell ("Russell"). NFR and Russell do not guarantee fairness, accuracy, completeness, correctness, reliability, usefulness, marketability, merchantability or fitness of the Index, and do not account for business activities or services that any index user and/or its affiliates undertakes with the use of the Index.

Investors should consider this document as only a single factor in making their investment decision and, as such, the report should not be viewed as identifying or suggesting all risks, direct or indirect, that may be associated with any investment decision. Nomura Group produces a number of different types of research product including, among others, fundamental analysis and quantitative analysis; recommendations contained in one type of research product may differ from recommendations contained in other types of research product, whether as a result of differing time horizons, methodologies or otherwise. The Nomura Group publishes research product in a number of different ways including the posting of product on the Nomura Group portals and/or distribution directly to clients. Different groups of clients may receive different products and services from the research department depending on their individual requirements.

Figures presented herein may refer to past performance or simulations based on past performance which are not reliable indicators of future or likely performance. Where the information contains an expectation, projection or indication of future performance and business prospects, such forecasts may not be a reliable indicator of future or likely performance. Moreover, simulations are based on models and simplifying assumptions which may oversimplify and not reflect the future distribution of returns. Any figure, strategy or index created and published for illustrative purposes within this document is not intended for "use" as a "benchmark" as defined by the European Benchmark Regulation. Certain securities are subject to fluctuations in exchange rates that could have an adverse effect on the value or price of, or income derived from, the investment.

With respect to Fixed Income Research: Recommendations fall into two categories: tactical, which typically last up to three months; or strategic, which typically last from 6-12 months. However, trade recommendations may be reviewed at any time as circumstances change. 'Stop loss' levels for trades are also provided; which, if hit, closes the trade recommendation automatically. Prices and yields shown in recommendations are taken at the time of submission for publication and are based on either indicative Bloomberg, LSEG or Nomura prices and yields at that time. The prices and yields shown are not necessarily those at which the trade recommendation can be implemented.

The securities described herein may not have been registered under the US Securities Act of 1933 (the '1933 Act'), and, in such case, may not be offered or sold in the US or to US persons unless they have been registered under the 1933 Act, or except in compliance with an exemption from the registration requirements of the 1933 Act. Unless governing law permits otherwise, any transaction should be executed via a Nomura entity in your home jurisdiction.

This document has been approved for distribution in the UK as investment research by NIPc. NIPc is authorised by the Prudential Regulation Authority and regulated by the Financial Conduct Authority and the Prudential Regulation Authority. NIPc is a member of the London Stock Exchange. This document does not constitute a personal recommendation within the meaning of applicable regulations in the UK, or take into account the particular investment objectives, financial situations, or needs of individual investors. This document is intended only for investors who are 'eligible counterparties' or 'professional clients' for the purposes of applicable regulations in the UK, and may not, therefore, be redistributed to persons who are 'retail clients' for such purposes.

This document has been approved for distribution in the European Economic Area as investment research by Nomura Financial Products Europe GmbH ("NFPE"). NFPE is a company organized as a limited liability company under German law registered in the Commercial Register of the Court of Frankfurt/Main under HRB 110223. NFPE is authorized and regulated by the German Federal Financial Supervisory Authority (BaFin).

This document has been approved by NIKH, which is regulated by the Hong Kong Securities and Futures Commission, for distribution in Hong Kong by NIKH. This document is intended only for investors who are 'professional investors' for the purposes of applicable regulations in Hong Kong and may not, therefore, be redistributed to persons who are not 'professional investors' for such purposes.

This document has been approved for distribution in Australia by NAL, which is authorized and regulated in Australia by the ASIC.

This document has also been approved for distribution in Malaysia by NSM.

In Singapore, this document has been distributed by NSL, an exempt financial adviser as defined under the Financial Advisers Act (Chapter 110), among other things, and regulated by the Monetary Authority of Singapore. NSL may distribute this document produced by its foreign affiliates pursuant to an arrangement under Regulation 32C of the Financial Advisers Regulations. This document is intended for accredited, expert or institutional investors as defined by the Securities and Futures Act (Chapter 289). Where the recipient of this document is not an accredited, expert or institutional investor, NSL accepts legal responsibility for the contents of this document in respect of such recipient only to the extent required by law. Recipients of this document in Singapore should contact NSL in respect of matters arising from, or in connection with, this document. THIS DOCUMENT IS INTENDED FOR GENERAL CIRCULATION. IT DOES NOT TAKE INTO ACCOUNT THE SPECIFIC INVESTMENT OBJECTIVES, FINANCIAL SITUATION OR PARTICULAR NEEDS OF ANY PARTICULAR PERSON. RECIPIENTS SHOULD

TAKE INTO ACCOUNT THEIR SPECIFIC INVESTMENT OBJECTIVES, FINANCIAL SITUATION OR PARTICULAR NEEDS BEFORE MAKING A COMMITMENT TO PURCHASE ANY SECURITIES, INCLUDING SEEKING ADVICE FROM AN INDEPENDENT FINANCIAL ADVISER REGARDING THE SUITABILITY OF THE INVESTMENT, UNDER A SEPARATE ENGAGEMENT, AS THE RECIPIENT DEEMS FIT. Unless prohibited by the provisions of Regulation S of the 1933 Act, this material is distributed in the US, by NSI, a US-registered broker-dealer, which accepts responsibility for its contents in accordance with the provisions of Rule 15a-6, under the US Securities Exchange Act of 1934. The entity that prepared this document permits its separately operated affiliates within the Nomura Group to make copies of such documents available to their clients.

This document has not been approved for distribution to persons other than 'Authorised Persons', 'Exempt Persons' or 'Institutions' (as defined by the Capital Markets Authority) in the Kingdom of Saudi Arabia ('Saudi Arabia') or a 'Market Counterparty' or a 'Professional Client' (as defined by the Dubai Financial Services Authority) in the United Arab Emirates ('UAE') or a 'Market Counterparty' or a 'Business Customer' (as defined by the Qatar Financial Centre Regulatory Authority) in the State of Qatar ('Qatar') by Nomura Saudi Arabia, Nlplc or any other member of the Nomura Group, as the case may be. Neither this document nor any copy thereof may be taken or transmitted or distributed, directly or indirectly, by any person other than those authorised to do so into Saudi Arabia or in the UAE or in Qatar or to any person other than 'Authorised Persons', 'Exempt Persons' or 'Institutions' located in Saudi Arabia or a 'Market Counterparty' or a 'Professional Client' in the UAE or a 'Market Counterparty' or a 'Business Customer' in Qatar. Any failure to comply with these restrictions may constitute a violation of the laws of the UAE or Saudi Arabia or Qatar.

For report with reference of TAIWAN public companies or authored by Taiwan based research analyst:

THIS DOCUMENT IS SOLELY FOR REFERENCE ONLY. You should independently evaluate the investment risks and are solely responsible for your investment decisions. NO PORTION OF THE REPORT MAY BE REPRODUCED OR QUOTED BY THE PRESS OR ANY OTHER PERSON WITHOUT WRITTEN AUTHORIZATION FROM NOMURA GROUP. Pursuant to Operational Regulations Governing Securities Firms Recommending Trades in Securities to Customers and/or other applicable laws or regulations in Taiwan, you are prohibited to provide the reports to others (including but not limited to related parties, affiliated companies and any other third parties) or engage in any activities in connection with the reports which may involve conflicts of interests. INFORMATION ON SECURITIES / INSTRUMENTS NOT EXECUTABLE BY NOMURA INTERNATIONAL (HONG KONG) LTD., TAIPEI BRANCH IS FOR INFORMATIONAL PURPOSES ONLY AND IS NOT BE CONSTRUED AS A RECOMMENDATION OR A SOLICITATION TO TRADE IN SUCH SECURITIES / INSTRUMENTS.

This material may not be distributed in Indonesia or passed on within the territory of the Republic of Indonesia or to persons who are Indonesian citizens (wherever they are domiciled or located) or entities of or residents in Indonesia in a manner which constitutes a public offering under the laws of the Republic of Indonesia. The securities mentioned in this document may not be offered or sold in Indonesia or to persons who are citizens of Indonesia (wherever they are domiciled or located) or entities of or residents in Indonesia in a manner which constitutes a public offering under the laws of the Republic of Indonesia.

An individual name printed next to NOI on the front page of a research report indicates that this document is a translation of a research report issued by NOI in the PRC. In all other cases, this document is prepared by Nomura Group or its subsidiary or affiliate (collectively, "Offshore Issuers") that is not licensed in the PRC to provide securities research. This research report is not approved or intended to be circulated in the PRC. The A-share related analysis (if any) is not produced for any persons located or incorporated in the PRC. The recipients should not rely on any information contained in this research report in making investment decisions and Offshore Issuers take no responsibility in this regard. NO PART OF THIS MATERIAL MAY BE (I) COPIED, PHOTOCOPIED, REPRODUCED OR DUPLICATED IN ANY FORM, BY ANY MEANS; OR (II) REDISSEMINATED, REPUBLISHED OR REDISTRIBUTED WITHOUT THE PRIOR WRITTEN CONSENT OF A MEMBER OF THE NOMURA GROUP. If this document has been distributed by electronic transmission, such as e-mail, then such transmission cannot be guaranteed to be secure or error-free as information could be intercepted, corrupted, lost, destroyed, arrive late or incomplete, or contain viruses. The sender therefore does not accept liability (in negligence or otherwise, and in whole or in part) for any errors or omissions in the contents of this document, which may arise as a result of electronic transmission. If verification is required, please request a hard-copy version.

The Nomura Group manages conflicts with respect to the production of research through its compliance policies and procedures (including, but not limited to, Conflicts of Interest, Chinese Wall and Confidentiality policies) as well as through the maintenance of Chinese Walls and employee training.

Additional information regarding the methodologies or models used in the production of any investment recommendations contained within this document is available upon request by contacting the Research Analysts of Nomura listed on the front page. Disclosures information is available upon request and disclosure information is available at the Nomura Disclosure web page:
